

REPORT ON LOTTERY EXPENDITURES

FOR K-12 EDUCATION, 2001-02

**A Report to the Legislature
as Required by Control Section 24.60
of the Budget Act of 2002**

**California Department of Education
Jack O'Connell, State Superintendent of Public Instruction
Sacramento, California
July 2003**

REPORT ON LOTTERY EXPENDITURES FOR K–12 EDUCATION, 2001-02

Introduction

Control Section 24.60 of the 2002 Budget Act requires the California Department of Education (CDE) to survey a representative sample of 100 local education agencies (LEAs), including county offices of education and K–12 school districts, to determine how lottery revenues were utilized during the 2001-02 fiscal year (see Appendix A). The CDE is then required to report the results of the survey to the Legislature and the Governor.

In an effort to provide a report that is useful and informative, we are presenting the results of our survey in two different ways. Prior to 1998, we reported the percentage of lottery funds spent by expenditure category for the sampled LEAs only. Beginning with our 1998 report (1996-97 expenditure data), we also weighted those percentages by statewide enrollment for each size and type of LEA surveyed to project a more accurate picture of statewide lottery expenditure patterns. We are providing charts that illustrate the percent of lottery funds spent on salaries and benefits for the surveyed LEAs.

Sampling Process

The sample of LEAs was selected by size, range, type, and geographical dispersion. To accomplish this, LEAs were sorted by the type of organization and their size. A total of 100 LEAs were selected to participate in the survey (see Appendix B). Only one LEA (Los Angeles Unified School District) meets the requirement of over 200,000 average daily attendance (ADA) to represent the extra large size category. Urban, suburban, and rural districts and county offices of education are contained in the sample.

The types and numbers selected were

<u>Type</u>	<u>Number Selected</u>	<u>Number in State</u>
• County Offices of Education	4	58
• Common Administration Districts	0	5
• Elementary School Districts	56	560
• Unified School Districts	32	326
• High School Districts	<u>8</u>	<u>87</u>
Totals	100	1,036

The size ranges and numbers selected were

<u>Size Range</u>	<u>Number Selected</u>	<u>Number in State</u>
• Small (under 2,500 ADA)	74	618
• Medium (2,500 to 10,000 ADA)	11	267
• Large (10,001 to 200,000 ADA)	14	150
• Extra Large (over 200,000 ADA)	<u>1</u>	<u>1</u>
Totals	100	1,036

Although only 10 percent of the state's LEAs were surveyed, 18 percent of the total statewide ADA for K–12 is represented within the survey due to the inclusion of the single district with more than 200,000 ADA. Small LEAs represented 74 percent of the surveyed LEAs; however, they represented only 5 percent of the ADA within the survey. In comparison, the single district with more than 200,000 ADA represented one percent of the surveyed LEAs, yet represented 68 percent of the ADA within the survey. The following chart shows ADA representations by size categories in three groups. The first column shows the breakdown by size category for total statewide K–12 ADA. The second column shows the ADA representation by size category for only the surveyed LEAs. The third column shows the percentage represented by size category using the surveyed LEAs as a percent of statewide K–12 ADA.

<u>LEA Size Categories</u>	<u>(1) ADA as a percent of Total Statewide K–12 ADA</u>	<u>(2) Surveyed ADA as a percent of Total ADA Within Survey</u>	<u>(3) Surveyed ADA as a percent of Statewide K–12 ADA</u>
Small	7	5	1
Medium	23	5	1
Large	57	22	4
Extra Large	<u>13</u>	<u>68</u>	<u>12</u>
Totals	100	100	18

Calculation Methods

The CDE is required to include in the survey LEAs having more than 200,000 ADA; the one extra large LEA that meets this requirement represents 67 percent of the total reported survey expenditures. Consequently, expenditure trends for the surveyed LEAs are more representative of the expenditure trends of larger LEAs than of statewide expenditure patterns. Therefore, we are providing additional information in an attempt to show not only expenditure patterns for the surveyed LEAs, but also statewide expenditure patterns.

As in past years, percentages of lottery expenditures were calculated for each individual expenditure category for the sampled LEAs only. The individual expenditure categories are those used by LEAs for accounting and reporting (see Appendix C). Since the larger LEAs represent a disproportionate share of the ADA within the survey, it is again important to note that these calculations are more representative of the larger LEAs.

Lottery expenditures for the surveyed LEAs have also been weighted by statewide enrollment for each size and type of LEA so that the sampled lottery expenditures are more reflective of total statewide lottery expenditure patterns. For example, unified school districts in our sample spent 81 percent of their lottery funds on salaries and benefits. When weighted by statewide enrollment for unified school districts, this percentage becomes 61 percent (see Appendix D). By weighting the percentages, the extra large district now represents 12 percent of the sample rather than 68 percent. We believe the data weighted by statewide enrollment more accurately reflect the statewide expenditure patterns for K–12 LEAs.

Beginning with the 1999-00 fiscal year, charter schools were given the option to report year-end financial data separately from their authorizing LEA by using a new Charter Schools Fund. If a charter school reported expenditure data using the Charter Schools Fund, then lottery expenditures were not separately identified, as they are in the district and county submissions. Because those charter school submissions did not separately identify lottery expenditures, we adjusted the authorizing LEA's ADA and enrollment data (solely for the purposes of weighting the data for this report) to not include the charter school's ADA and enrollment. Therefore, a charter school's ADA and enrollment were not included in these lottery calculations if the charter school reported 2001-02 expenditures using the Charter Schools Fund.

Reported Expenditures

The information collected from the sample of LEAs reflects an increase in spending lottery funds for salaries and benefits (see Appendix D). Information reported to us shows that 78 percent of the funds from the surveyed LEAs was spent on salaries and benefits. The remaining 22 percent was spent on Books and Supplies, Services and Operating Expenses, Capital Outlay, and Other Outgo. Projecting statewide expenditure patterns using the survey data shows 65 percent of the funds spent on salaries and benefits, and 35 percent spent in the other expenditure categories.

The following tables identify the percentages spent on salaries and benefits for the sampled districts, using calculations for both the surveyed LEAs only and then the surveyed LEAs weighted by statewide enrollment, sorted first by type of LEA and then by size of LEA.

<u>Type of LEA</u>	<u>Percent Spent on Salaries and Benefits (Surveyed LEAs Only)</u>	<u>Percent Spent on Salaries and Benefits (Weighted by Enrollment)</u>
County Offices of Education	4	23
Elementary School Districts	80	80
Unified School Districts	81	61
High School Districts	78	60

<u>Size of LEA</u>	<u>Percent Spent on Salaries and Benefits (Surveyed LEAs Only)</u>	<u>Percent Spent on Salaries and Benefits (Weighted by Enrollment)</u>
Under 2,500 ADA (small)	46	46
2,500 to 10,000 ADA (medium)	29	49
10,001 to 200,000 ADA (large)	69	68
Over 200,000 ADA (extra large)	85	85
Total Average percent Spent on Salaries and Benefits	78	65

Based on the data presented above and on the bottom of Page 3, it appears that lottery expenditure patterns are a function of both the size and type of the LEA. In the above calculations, smaller districts generally spent less of their lottery funds on salaries and benefits than did the larger districts. As shown on the previous page, information reported by the four surveyed county offices of education shows that they spent the majority of their lottery funds on other than salaries and benefits. However, because of the variability of expenditure patterns among LEAs, even within similar size and type categories, we do not recommend applying the expenditure percentages cited in this report, for either the surveyed LEAs or weighted by enrollment, to any specific LEA. The charts in Appendix E illustrate the variability of expenditure patterns among the surveyed LEAs.

Comparisons With Previous Years

Calculations for both the surveyed LEAs only and the surveyed LEAs weighted by enrollment show that many LEAs are continuing to support salaries and benefits with lottery funds. The salaries and benefits category, with 77.8 percent of the expenditures, remains the single largest category of expenditures for lottery funds. (See the following section for a discussion of the impact of Proposition 20.) The following table reflects the proportion of lottery expenditures for the surveyed LEAs devoted to salaries and benefits for the last 16 years. For historical trends of lottery expenditures, see Appendix F.

<u>Fiscal Year</u>	<u>Percent Spent on Salaries and Benefits (Surveyed LEAs Only)</u>	<u>Percent Spent on Salaries and Benefits (Weighted by Enrollment)</u>
1986-87	57.2*	**
1987-88	60.6*	**
1988-89	65.0*	**
1989-90	74.2	**
1990-91	83.0	**
1991-92	91.4	**
1992-93	73.2	**
1993-94	86.3	**

1994-95	87.1	**
1995-96	85.7	**
1996-97	87.7	75.6
1997-98	87.8	69.0
1998-99	90.4	77.0
1999-00	90.8	79.0
2000-01	73.3	55.8
2001-02	77.8	64.6

*These percentages reflect actual statewide data (rather than data from the 100 sampled LEAs).

**Beginning with 1996-97 data, the percentage spent on salaries and benefits is reflected using data for both the surveyed LEAs only, and the surveyed LEAs weighted by enrollment. Prior to 1996-97, data were not weighted by statewide enrollment; therefore, percentages are not available.

Lottery Funds for Instructional Materials—Proposition 20

In March 2000, California’s voters passed Proposition 20, known as the “Cardenas Textbook Act of 2000.” Proposition 20 provides that, beginning in fiscal year 1998-99, one-half of statewide growth in lottery funds for education over the level set in the 1997-98 fiscal year must be allocated to school districts and community colleges for the purchase of instructional materials.

Prior to 2000-01, the amount of lottery revenues allocated for Proposition 20 was less than 5 percent of the total lottery revenues allocated and the impact was difficult to assess. However, approximately 11 percent of the total K–12 lottery allocations for the 2001-02 fiscal year was earmarked for Proposition 20 instructional materials. Although we cannot determine with certainty how much of an impact Proposition 20 had on the 2001-02 lottery expenditures, it appears that it did have a notable impact. The percentages spent on salaries and benefits reflected in 2000-01’s lottery sample (73.3 percent) and 2001-02’s lottery sample (77.8 percent) are significantly lower than those of the previous seven years. Simultaneously, the percentages spent on books and supplies (16.1 percent in 2000-01’s sample and 18.6 percent in 2001-02’s sample) are the highest ever reported by sampled districts.

Comments and Conclusions

The data reported for lottery expenditures indicate that many LEAs continue to spend the majority of lottery funds on salaries and benefits. However, Proposition 20 appears to have made a significant impact on the 2001-02 lottery expenditures.

Although lottery expenditures are a relatively small percentage of the total K–12 funding, the CDE continues to recommend that districts use lottery funds for nonrecurring costs. The 2001-02 lottery survey shows that the majority of funds (78 percent for the surveyed LEAs and 18 percent weighted by enrollment) were still spent for staff salaries and benefits. If lottery funding declines significantly, the loss in revenue will have to be absorbed by other parts of LEA budgets to cover the ongoing salary and benefit costs. This year’s data for the surveyed LEAs brings the sixteen-year average spending for salaries and benefits to 79.5 percent.

Again, it is important to note that because LEAs have varying spending patterns, the expenditure percentages cited in this report should not be applied to any specific LEA.

BUDGET ACT OF 2002

Section 24.60

SEC. 24.60. (b) The State Department of Education shall conduct a survey of a representative sample of 100 local education agencies to determine the patterns of use of lottery funds in those agencies. The sample shall be drawn to include all local education agencies having more than 200,000 ADA and representative local education agencies randomly selected by size, range, type, and geographical dispersion. On or before May 15, 2003, the State Department of Education shall report to the Legislature and the Governor the results of the survey for the 2001-02 fiscal year.

**EXPENDITURE CATEGORIES USED IN
LEA ACCOUNTING AND REPORTING**

Certificated Salaries	1000	Salaries of teachers and other employees in positions requiring credentials
Classified Salaries	2000	Salaries of all employees, other than those in positions requiring credentials
Employee Benefits	3000	Staff benefits of all employees; sub-accounts distinguish between Certificated and Classified employees

The sum of the first three categories is the total of all compensation to employees.

Books and Supplies	4000	All books and supplies; sub-accounts distinguish between those for instruction and those for support functions
Services and Other Operating Expenses	5000	Professional and consultant services, travel and conferences, insurance, and other miscellaneous expenditures
Capital Outlay	6000	Sites, buildings, equipment, and the initial complement of books for a new school; includes replacement of equipment
Other Outgo	7000	Tuition
